Nanos Leadership Tracking Data Summary

LEADERSHIP

A national dual-frame (land+cell) random telephone survey is conducted weekly by Nanos Research using live agents.

The weekly tracking figures are based on a four-week rolling sample comprised of 1,000 interviews. To update the tracking a new week of 250 interviews is added and the oldest week dropped. The margin of error for a survey of 1,000 respondents is ± 3.1 percentage points, 19 times out of 20.

Methodology

Survey Methodology

The Weekly Nanos Party Power Index Tracking is produced by the Nanos Research Corporation, headquartered in Canada, which operates in Canada and the United States. The data is based on a dual frame (land + cell-lines) random telephone interviews with 1,000 Canadians using a four week rolling average of 250 respondents each week, 18 years of age and over.

The random sample of 1,000 respondents may be weighted by age and gender using the latest census information for Canada. The interviews are compiled into a four week rolling average of 1,000 interviews, where each week the oldest group of 250 interviews is dropped and a new group of 250 interviews is added.

A random telephone survey of 1,000 Canadians is accurate ± 3.1 percentage points, plus or minus, 19 times out of 20.

About Nanos

Nanos is one of North America's most trusted research and strategy organizations. Our team of professionals is regularly called upon by senior executives to deliver superior intelligence and market advantage whether it be helping to chart a path forward, managing a reputation or brand risk or understanding the trends that drive success. Services range from traditional telephone surveys, through to elite in-depth interviews, online research and focus groups. Nanos clients range from Fortune 500 companies through to leading advocacy groups interested in understanding and shaping the public landscape. Whether it is understanding your brand or reputation, customer needs and satisfaction, engaging employees or testing new ads or products, Nanos provides insight you can trust.

Technical Note

Element	Description
Organization who commissioned the research	Nanos Research
Sample Size	1,000 randomly selected individuals; four week-rolling average of 250 interviews per week. The interviews are compiled into a four week rolling average of 1,000 interviews, where each day the oldest group of 250 interviews is dropped and a new group of 250 interviews is added.
Margin of Error	±3.1 percentage points, 19 times out of 20.
Mode of Survey	Tracking; RDD dual frame (land- and cell-lines) random telephone survey.
Sampling Method Base	The sample included both land- and cell-lines RDD (Random Digit Dialed) across Canada.
Demographics (Captured)	Atlantic Canada, Quebec, Ontario, Prairies, British Columbia; Men and Women; 18 years and older. Six digit postal code was used to validate geography.
Demographics (Other)	Age, gender, education, income
Fieldwork/Validation	Live interviews with live supervision to validate work as per the MRIA Code of Conduct
Number of Calls	Maximum of five call backs.
Time of Calls	Local time 5:00-9:00 pm, on weekends 12:00- 9:00 pm.
Field Dates	April 17 th , to May 13 th , 2016
Language of Survey	The survey was conducted in both English and French.

Element	Description
Weighting of Data	The results were weighted by age and gender using the latest Census information (2011) and the sample is geographically stratified to ensure a distribution across all regions of Canada. See tables for full weighting disclosure
Screening	Screening ensured potential respondents did not work in the market research industry, in the advertising industry, in the media or a political party prior to administering the survey to ensure the integrity of the data.
Excluded Demographics	Individuals younger than 18 years old; individuals without land or cell lines could not participate.
Stratification	By age and gender using the latest Census information (2011) and the sample is geographically stratified to be representative of Canada. Smaller areas such as Atlantic Canada were marginally oversampled to allow for a minimum regional sample.
Estimated Response Rate	Nine percent, consistent with industry norms.
Question Order	Question order in the preceding report reflects the order in which they appeared in the original questionnaire.
Question Content	This was part of a weekly tracking survey. The preceding module included questions about national issues of concern and ballot preferences and economic confidence.
Question Wording	The wording of questions is as presented in the report with a randomization of the political leaders for the question involving leader qualities.
Survey Company	Nanos Research
